

BIDDS Debrief Card Changelog

Changelog 1.2

- Fixed Store Description not parsing due to actual weapon name logging differently
- Prime Nav and Aiding condensed to one field
- Buffers displayed as bearing/range
- FCI shown in degrees and Crossrange Miss

Changelog 1.1

- Full Sortie bug fix for JASSM and MALD releases
- FCI for GWD is calculated using XR miss and Downrange
- Fix for MALD, GWD releases where debrief card data does not fill into correct spot
- MALD Data is removed if not logged (i.e. N 99 99 E 099 99 9999' = blank)
- If MALD TOF not logged, TOT blank
- BIDDSv4 added to ZIP

Changelog 1.0

- Turbo Mode relabeled Full Sortie
- JASSM releases that do not match do not show nan
- Fixed stalling if you do not select JASSM report
- Release Bullseye now calculated for all weapons, if no TGT bullseye then Release Bullseye will show on card
 - Release Bullseye will show (REL) next to it
- JASSM DT releases show blank instead of bad data
- Bullseye Updater in Toolbar
 - Will update a Debrief Card TGT and Release BE's (if you need to update manually)
- Folder Create
 - Will create a debrief folder labeled with your callsign and open folder
- BIDDS Open Button
 - Open BIDDS automatically
- BIDDS Folder Open (Toolbar)
 - Opens BIDDS directory if you need to drop new DRD files
- Changelog and How To Guide added to Toolbar

Changelog 0.5

- Added Turbo Mode- debrief card averages 1 minute to create now
 - Records are only searched based on first/last weapon release versus entire flight
 - May cause some instability, haven't tested fully
- JASSM + MALD TOF and TOTs are pulled from LAR records
- JASSM names defaults to Weapon Group and Mission Name
- JASSM has option to cross reference JDPI data with JASSM summary card so that JDPI/Target name, lat, long, elevation, BE are correctly displayed on the card

- Option to select DTC JASSM TARGET SUMMARY on Debrief Card creation or manually after card is made
- How to Guide added to toolbar
- Fixed WCMD TOT

Changelog 0.4

- Fixed Gravity Buffers
- Fixed GWD FCI showing
- Fixed Wpn Names not showing if Store Description not in record
 - Added WPN Code lookup and wpncodes.csv to manually edit (JDAM and Gravity added)
 - JDAM records were missing [TGP Mode] and [Store Description], not sure why?
- Reenabled Console window to help with troubleshooting
- Troubleshooting
 - 0-80%
 - Mission Events are parsed
 - Releases are parsed
 - Most likely issue is release fields are not available and throwing error
 - 80-90%
 - Releases are paired to their Mission Events since not all data is logged in just the release
 - GWD causes some issues since it has fields that don't exist in other weapon releases
 - All the different weapon types are combined into one
 - Excel file is created and tabs created
- Send:
 - Text file and Excel Card

Changelog 0.3

- Fixed stuck loading at 90%
- GPS File checkbox
- Added Mach and combined all speed columns into one

Changelog 0.2

- Fixed loading last mission from FDR
- MALD/JASSM now show as MALD/MALDJ and 158A and 158B
- JDAM
 - Streamline Direct Targets now show properly
 - DS-Stat if D127 found and TGP mode static
 - DS-Cont [ON/OFF] if D127 found and TGP mode continuous, On/Off if streaming at release

- DS-Pred [ON/OFF] if D127 found and TGP mode predictive (Need to test), On/Off if streaming at release
 - GBU-54 should show properly now
 - Fixed In Range and Unachievable LARs for JDAM
 - Laser Code shown next to Location Station
- Coloring for ZONE, RANGE, UNACHIEV
- Bullseye data and callsign will now save to a defaults file
- JMPS GPS File created using Mission Event Data for playback (NMEA format)
- Added a Callsign text box for file saving and also displays on card
- Formatted Excel sheet to print properly now, small margins and fit all columns
