BIDDS Debrief Card

V1.0

6/16/2020

UNCLASSIFIED

UNCLASSIFIED

Workflow

- The DTC logs mission data automatically during flight
- BIDDS allows you to view this mission data and save to a text file
- BIDDS Debrief Card searches this text file for all release data, reformats data, and outputs to an Excel Spreadsheet

UNCLASSIFIED

Install

- Unzip Debrief Card.zip to Desktop or Network Share
- Create a shortcut to debrief.exe for quick access
- Install BIDDS v4 and ODD-EC using SetupBIDD Sv4.exe
 - Once ODD-EC Manager installed, click Install Wizard to find DTC sleds

6/16/2020

UNCLASSIFIED

UNCLASSIFIED

Step 1: Debrief Program Open/Type Data

- Open Debrief Program (debrief.exe)
- Input Sortie Data

Input Bullseye Data from Sortie.

- This will be used to calculate Target/Release bullcuts on the final card.
- Format needs to be H DD MM.MMMM

Input Callsign (base callsign will be saved for future cards)

By Default, the program searches the Flight Recording text file only for mission data at release time. This significantly speeds up creating the card. If you would like to output mission data for the entire sortie, select Full Sortie (i.e. you would like a GPS file with the entire route). Expect parsing to take approx. 5 minutes versus 1 minute for defaults.

Check GPS file, if you would like a JMPS GPS file to be created.

UNCLASSIFIED

Step 2: Debrief Program Create Folder

- Click on Folder Icon

Debrief Card

Guide Tools

version 1.0

Input Bullseye Data

BE Name

Latitude

Longitude

Create Debrief Card

Callsign

☐ Full Sortie ☐ GPS Trail

0%

A new folder will be created on your desktop if it doesn't exist already

- Desktop/BIDDS Files/YYYYMMDD CS Folder will open

This folder will be where you save your files required to create your Debrief Card

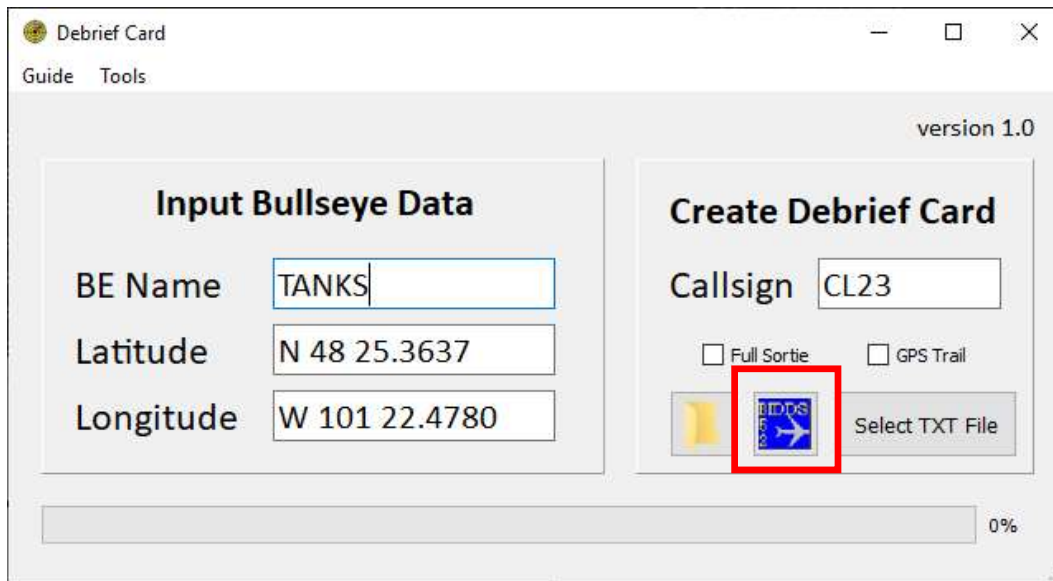

BIDDS Open

← → ▾ ▴ > This PC > Desktop > BIDDS Files > 20200614 CL23

UNCLASSIFIED

Step 3: BIDDS Open

- Click on BIDDS Icon, BIDDS will open

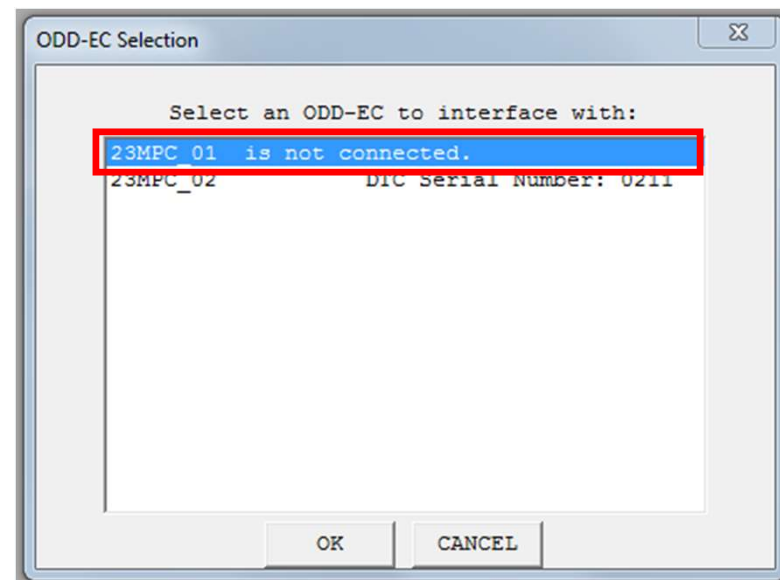

The screenshot shows the 'Debrief Card' application window, version 1.0. It has a 'Guide' and 'Tools' menu. The window is divided into two main sections: 'Input Bullseye Data' and 'Create Debrief Card'. In the 'Input Bullseye Data' section, there are three text input fields: 'BE Name' containing 'TANKS', 'Latitude' containing 'N 48 25.3637', and 'Longitude' containing 'W 101 22.4780'. In the 'Create Debrief Card' section, there is a 'Callsign' input field containing 'CL23', two unchecked checkboxes labeled 'Full Sortie' and 'GPS Trail', a 'Select TXT File' button, and a small icon of a blue plane with 'BIDDS' text, which is highlighted by a red square. A progress bar at the bottom shows '0%'.

UNCLASSIFIED

Step 3: **BIDDS** Select DTC

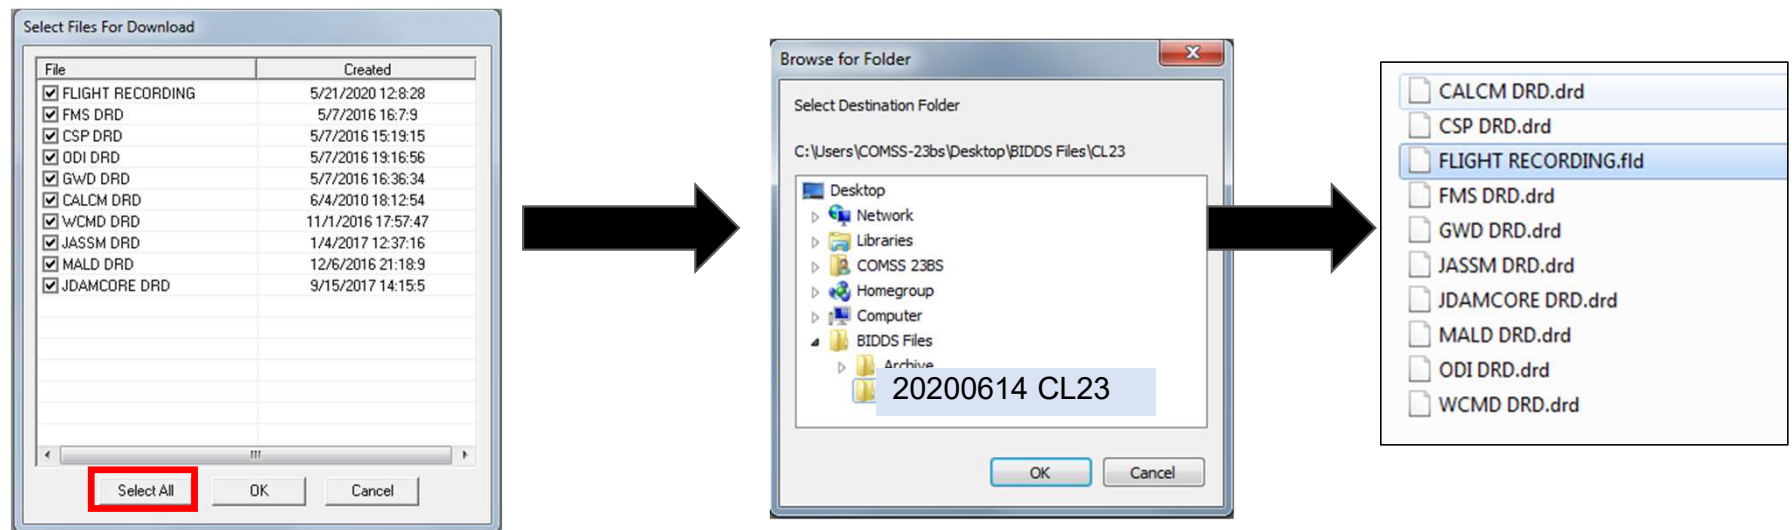

- Insert DTC into ODEC
- Click ODEC and select DTC

UNCLASSIFIED

Step 2: BIDDS Save FDR Files

- Select all files and save to Debrief Folder

Step 2: BIDDS Copy DRD Files (as required)

- The DTC saves flight data into the FLIGHT RECORDING.fld file.
- The DRD files are used to decode this FLD file and need to be in the BIDDS program folder located at [C:\Program Files \(x86\)\BIDDS](#).
- After initially installing BIDDS and after OLS updates, copy the current DTC DRD files to this folder or you will get an error
 - **Error: A DRD file could not be found that matches the application ID**
 - A shortcut to this folder is provided in the Debrief Card Toolbar:
Tools>Open BIDDS Folder
- Once the DRD files are copied to the BIDDS folder, you don't need to copy again unless a different OLS DTC is used

UNCLASSIFIED

Step 2: BIDDS Copy DRD Files (as required)

- Example Saving DRD files into BIDDS Install Folder

The diagram illustrates the process of copying DRD files into the BIDDS installation folder. It consists of three main parts:

- Debrief Card Software:** A screenshot of the 'Debrief Card' application (version 1.0) showing the 'Tools' menu with 'Open BIDDS Folder' selected. The 'Create Debrief Card' section shows fields for 'BE Name' (TANKS), 'Latitude' (N 48 25.3637), 'Longitude' (W 101 22.4780), and 'Callsign' (CL23).
- Files to be Copied:** A list of files to be copied from DTC into BIDDS:
 - BIDDS.exe
 - CIDManager.exe
 - B52DLL.dll
 - CID.dll
 - DMSSwaps.dll
 - DTCFS.dll
 - SCSI.dll
 - BIDDS.chm
- BIDDS Installation Folder:** A list of files already in the BIDDS folder:
 - BIDDS.exe
 - CIDManager.exe
 - B52DLL.dll
 - CID.dll
 - DMSSwaps.dll
 - DTCFS.dll
 - SCSI.dll
 - BIDDS.chm
 - CALCM DRD.drd
 - CSP DRD.drd
 - FMS DRD.drd
 - GWD DRD.drd
 - JASSM DRD.drd
 - JDAMCORE DRD.drd
 - MALD DRD.drd
 - NUC DRD.drd
 - ODI DRD.drd
 - WCMD DRD.drd

Arrows indicate the flow from the Debrief Card software to the list of files to be copied, and then to the BIDDS installation folder.

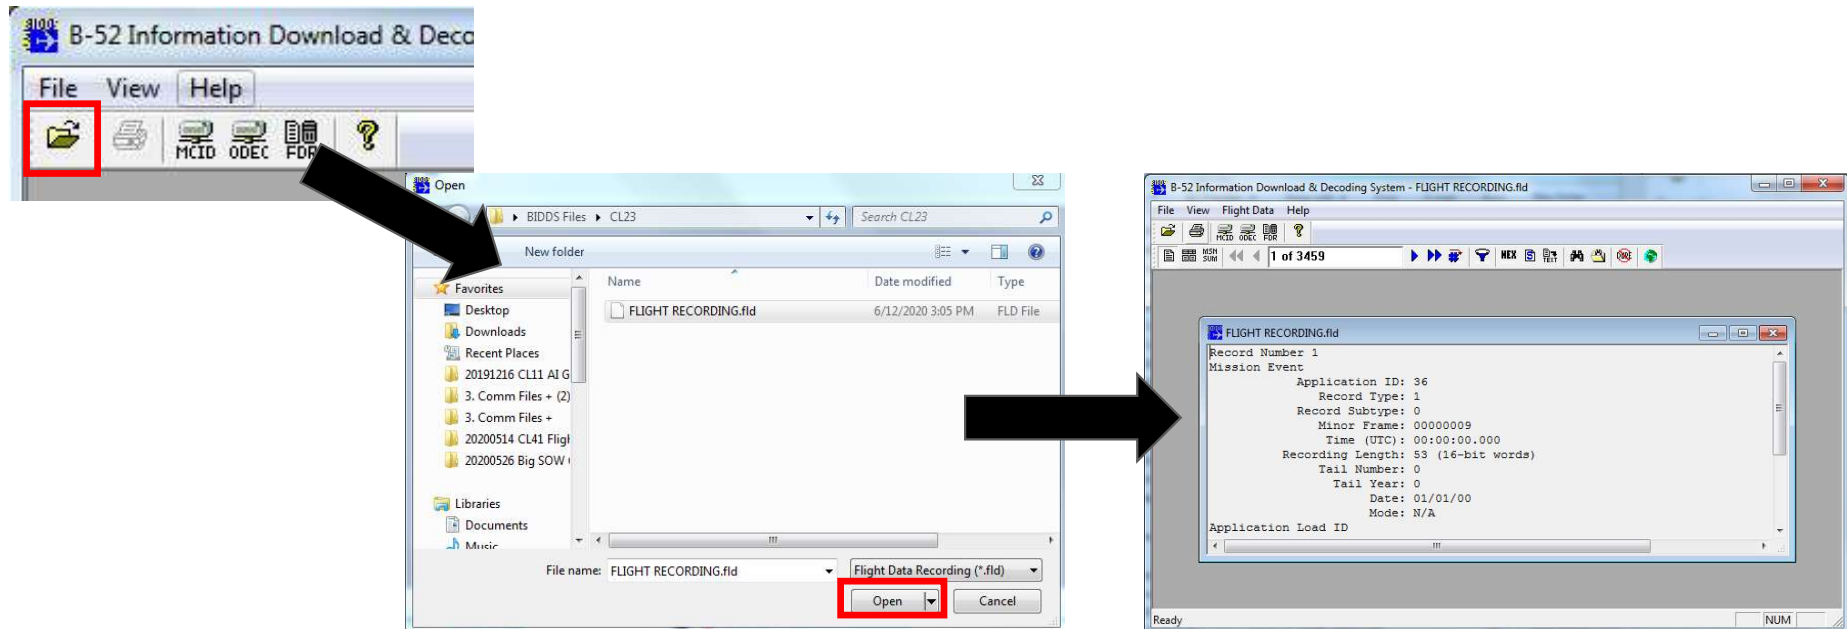

Copy DRD files saved from DTC into BIDDS Installation folder prior to opening FDR files in BIDDS

C:\Program Files (x86)\BIDDS

UNCLASSIFIED

Step 3: BIDDS Open FLD File

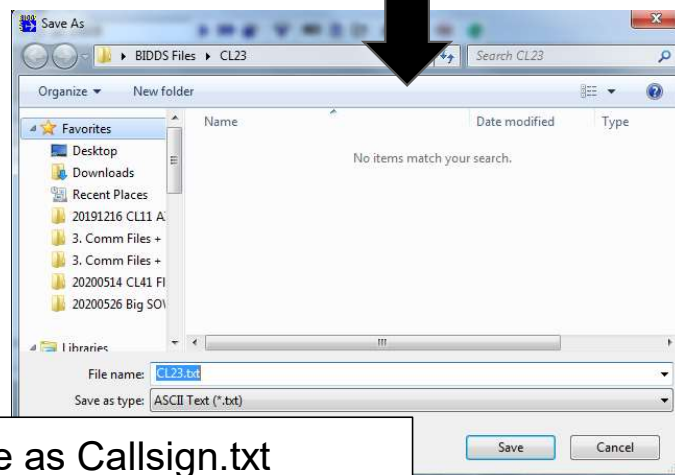

- Click open in BIDDS and select previously saved FDR file saved from DTC (Desktop/BIDDS Files/)

UNCLASSIFIED

Step 3: BIDDS Save FLD to Text File

- Click on Text Save in Toolbar

Text file saved in Debrief Folder. This file contains all the Flight Recording files in text format

Note: BIDDS will freeze up while saving this file. Do not continue to next step until BIDDS is no longer frozen (spinning wheel). The text file may take up to 5 min to create if the Flight Recording has not been erased prior to flight since all flights continue writing to the same file

UNCLASSIFIED

Step 4: Debrief Program Select Text File

- Open Debrief Program (debrief.exe)

Debrief Card version 1.0

Input Bullseye Data

BE Name: TANKS

Latitude: N 48 25.3637

Longitude: W 101 22.4780

Create Debrief Card

Callsign: CL23

☐ Full Sortie ☐ GPS Trail

Select TXT File

Select Flight

Missions Found: 1

Date: 06/09/20

Select

CL23.txt

File name: CL23.txt

Text File (*.txt)

Open Cancel

Click Select TXT File

Select the date you Mission Flew

Find TXT file saved from BIDDs

UNCLASSIFIED

UNCLASSIFIED

Step 4: Debrief Program Loading

- The program will start searching the file and update progress bar

The screenshot shows the 'Debrief Card' application window, version 1.0. It has a menu bar with 'Guide' and 'Tools'. The interface is divided into two main sections: 'Input Bullseye Data' and 'Create Debrief Card'. In the 'Input Bullseye Data' section, there are three text input fields: 'BE Name' with the value 'TANKS', 'Latitude' with the value 'N 48 25.3637', and 'Longitude' with the value 'W 101 22.4780'. In the 'Create Debrief Card' section, there is a 'Callsign' input field with the value 'CL23', two unchecked checkboxes labeled 'Full Sortie' and 'GPS Trail', and a 'Select TXT File' button. Below these sections is a progress bar that is partially filled with green, showing a 10% completion status.

The program will now search the text file. In the background, 3 different record types are searched then matched.

1. Mission Events- Records showing aircraft parameters
2. Weapon Release Events- Different for each weapon
3. SOW IZ LAR Records- For TOF calculations

These events are then matched combined to output all the required data for a release. Realize there are some limitation inherent to how the DTC logs missions:

- Some data that is matched between events may have a time difference of up to 10 seconds
- Some data is missing/needs to be filled in later
 - GPS FOM only logged for GWD release, defaults to 1 for other releases
 - JASSM JDPI data needs to be paired to a JASSM DTC Summary

UNCLASSIFIED

Step 4: Debrief Program JASSM match

- If JASSM releases are found, a dialog will ask if you would like to match to a JASSM DTC Summary Report. Select Report to have JDPI name, coordinates, elevation be displayed properly. This can also be accomplished after.

Tools>JASSM Report Match

BE Latitude	
BE Longitude	

Update the Fill Ins fields on the right of the card to populate the remaining data in the card.

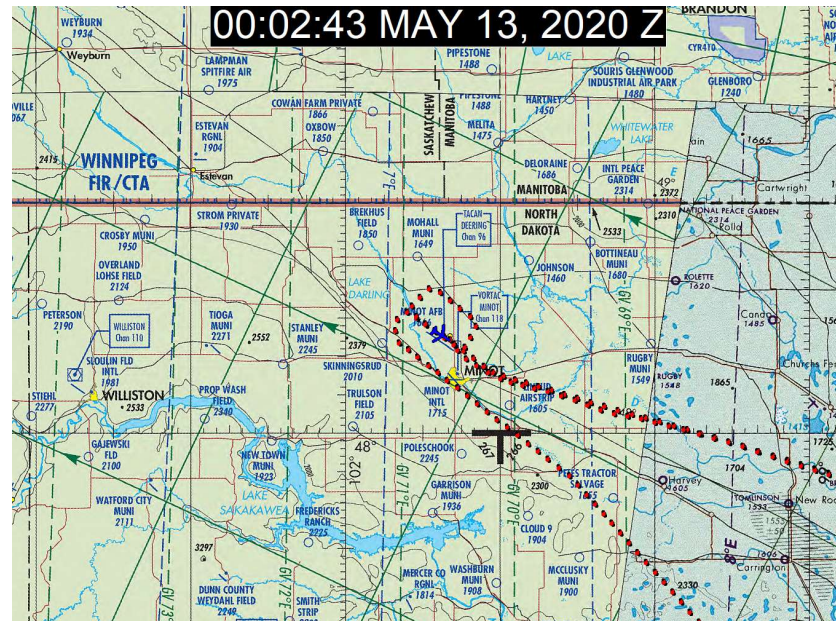

Other Sheets:

- Combined (This is where all the debrief data pulls from). Fill in missing/incorrect release data on this sheet and it will be pulled into the Debrief Card automatically
- Timestamps (Shows all Mission Events from FDR File)
- Weapon Tabs
 - Show release events and all data from FDR File

UNCLASSIFIED

Step 4: Debrief Program GPS File

- If JMPS is installed on the computer running the debrief program, it will automatically open up the GPS trail

6/16/2020

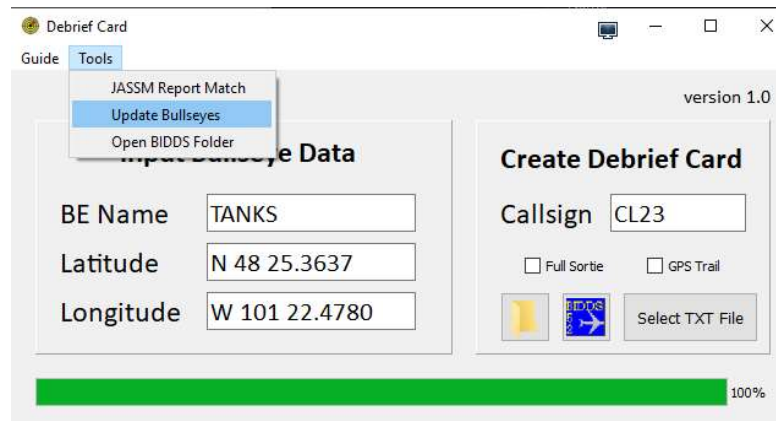

UNCLASSIFIED

18

UNCLASSIFIED

Optional Update Bullseye Data

- Sometimes you may need to update bullseye data if the target coordinates do not correctly pull from the DTC. To do so, update the coordinates on the Combined Tab and save, then click Tools>Update Bullseyes and select your debrief card
- The bullseyes will be updated based on the Bullseye in the Debrief Card Program

Current Limitations

- The DTC sometimes skips logging data
 - JASSM DT coordinates
 - GPS FOM not logged for every release
- BIDDS does not output some records to the text file
 - Targeting Pod Data
 - ALCM releases
- Some data is logged in unknown ways
 - JDAM delays are logged in integer/exponent that needs to be correlated to a ms delay. Therefore delays above 15 ms just show DELAY

Bug Reporting

- If you find a bug or your data does not output to a card, save your text file for troubleshooting
 - Run the debrief card using debrief (debug).exe
 - Record what percent the progress bar got to
 - If any errors were displayed in the console window
 - What weapons released? Sim/War? OLS version
